## Ongoing Research

Fixed-Mean Gaussian Processes for ad-hoc Bayesian Deep Learning (under review) Converting models to Bayesian by creating a Gaussian Process with fixed predictive mean to that model.	<a href="#">[Draft]</a>
Regularization as Estimation, A PAC-Bayes-Chernoff Approach A prescriptive framework, grounded in PAC-Bayes-Chernoff bounds, that reframes regularization as a statistical estimation problem.	
Revisiting the Marginal Likelihood through a PAC-Bayesian lens While marginal likelihood remains a critical component, generalization in Bayesian models depends on additional factors beyond marginal likelihood alone.
